The Problem We Solve

E-commerce companies struggle to manage high volumes of customer service requests efficiently because requests are fragmented, repetitive, manually processed, and not transformed into useful business insights.

Two Levels of Pain

Level 1 — Operational Problem

Support teams spend too much time manually reading, categorizing, and routing tickets instead of solving customer problems faster.

"Where is my order?"

"I want a refund"

"My product arrived broken"

"The payment failed"

"I received the wrong item"

Level 2 — Insight Problem

E-commerce businesses fail to use customer service interactions as a source of operational intelligence.

Product Quality

"Arrived broken" complaints → supply chain or packaging issue

Listing Problems

"Not as described" spikes → fix the description before more returns

Return Patterns

High return on one SKU → quality or expectation mismatch

Sentiment Analysis

Negative sentiment rising → early warning before reviews crater

Market Opportunity

A large, growing, underserved market...

...with no dominant EU-native player.

A Large, Growing, Underserved Market

\$23B+

EU Customer Care
BPO Market (2023)

→ \$42.6B by 2031

7.6%

EU BPO CAGR

Solid growth baseline

22–26%

AI for CS

Doubles every 3–4 yrs

~75%

Contact centers
not yet using AI

Early-majority phase

Key Market Facts

- Only 25% of contact centers have fully integrated AI
- Global CC outsourcing: \$97B (2024) → \$164B (2030) at 9.8% CAGR
- VoC platform market grew 22% in 2025 alone (Gartner)
- AI-enabled CS delivers 40–50% reduction in service interactions
- No dominant EU-native player in the mid-market sub-segment

Who We Sell To

PRIMARY ICP — E-Commerce & D2C Brands	Value
Headcount	100–800 employees
Annual Revenue	€15M–€200M
Support Team	15–80 agents
Monthly Contacts	10,000–150,000
Economic Buyer	Head of CX / VP Customer Care
Champion	CX Ops Manager / Customer Insights Lead
Target ACV	€20,000–€60,000 / year
Sales Cycle	6–10 weeks

QUALIFICATION CRITERIA

5,000+ contacts/month

Below this, a spreadsheet analyst still wins

CX tied to revenue

Churn-sensitive or reputation-sensitive

Stack maturity

Already on Zendesk, Gorgias, Freshdesk, or Intercom

Geography (v1)

PT · ES · UK · Benelux · Nordics

✓ One champion who can sign ✓ No enterprise InfoSec gauntlet ✓ Immediate ROI story ✓ SaaS-native buyers

What TICXIS Delivers

MODULE 1 — Customer Service Automation

1	Centralized intake One chatbot receives all requests regardless of channel
2	Structured ticket creation Extracts category, product, urgency, and required action automatically
3	AI classification Damaged product · refund · delay · return · wrong item · payment issue
4	Confidence threshold $\geq 70\%$ Auto-handled · below 70% → routed to human agent for review

MODULE 2 — Operational Intelligence

Product complaint Sentiment Analysis Which SKUs generate the most tickets and for what reason
Trend detection Contact spike correlation with product releases and logistics events
Recurring issue alerts Auto-flag when a product exceeds a complaint threshold in a time window
Cross-team intelligence Push insights to Product, Operations, and C-suite, not just CS team

Competitive Landscape

Company	EU Native	Mid-Market	GDPR	Ticket Intel	Multi-lingual	Price Range
TICXIS ★	✓	✓	✓	✓	✓ PT/ES/FR/IT/DE	€20k–€60k ACV
SentiSum	✗	✓	✗	Partial	Partial	\$36k+/yr
Chattermill	✗	✗	✗	✓	✓ (100+)	€80k+ ACV
Lumoa	✓	✓	✓	✗ (NPS)	Partial	Acquired
Qualtrics	Partial	✗	Partial	Partial	✓	€100k+ ACV
Medallia	Partial	✗	Partial	Partial	✓	€150k+ ACV

No competitor combines EU-native GDPR architecture + mid-market pricing + ticket intelligence + multilingual European language support.

Why Can't OpenAI Just Build This? hi javi :D

Data Network Effect

Every customer generates labeled e-commerce ticket data. Our model retrains on European retail-specific patterns.
A GPT-4 zero-shot call cannot replicate this operational context without years of deployment.

Workflow Lock-In

TICXIS embeds into Zendesk, Gorgias, and Freshdesk at the routing-rule and SLA-trigger level. Replacing it means reconfiguring the entire support operation. OpenAI sells API tokens, not operations teams.

Regulatory Moat

GDPR-native architecture, EU-only data residency, and PII redaction cannot be retrofitted onto a US-first product without major legal and architectural restructuring, which is a structural entry barrier.

Vertical Specialization

Our taxonomy, escalation logic, and prompt engineering are built for e-commerce CS. Building this for a general AI would require the same domain work, at which point they have built a vertical SaaS. That is TICXIS.

Go-to-Market Strategy

Phase 1 · Months 1–6	Phase 2 · Months 6–18	Phase 3 · Months 18–36
Proof of Concept ■ 3–5 lighthouse customers in Iberian e-commerce ■ Founder-led direct outreach ■ Design-partner pricing (50–60% off) for case study rights ■ Targets: Gorgias/Zendesk users, 20k–100k contacts/month	Market Expansion ■ Expand to Spain, UK, Benelux ■ 2 inside sales AEs + content marketing ■ Zendesk, Freshdesk, Gorgias, Intercom integrations ■ Shopify Partners + WooCommerce agency network	Scaling ■ Partner channel via CX consulting firms ■ Vertical playbooks: fashion, electronics, home goods ■ Secondary ICP: SaaS/B2B software ■ Series A readiness at €2M+ ARR
 3 customers · 40%+ ticket deflection	 25–35 customers · €1.1M ARR	 60–80 customers · €2.8M ARR

AI Unit Economics - The Silicon Cost

INFERENCE COST PER TICKET		
Input tokens/ticket	~400 tokens	\$0.00120
Output tokens/ticket	~50 tokens	\$0.00075
Sonnet (claude-sonnet-4)	450 tokens	~\$0.00195
Haiku (claude-haiku-4-5)	450 tokens	~\$0.00054
Blended (80% Haiku / 20% Sonnet)	—	~\$0.00082

**\$1 per 1,000 tickets classified
(blended Haiku / Sonnet strategy)**

MONTHLY COST BY CUSTOMER TIER			
Tier	Volume & Contract	Cost/Mo	Cost/Yr
Starter	20,000 tickets/mo — €20–30k ACV	\$20/mo	\$240/yr
Growth	60,000 tickets/mo — €35–60k ACV	\$60/mo	\$720/yr
Scale	120,000 tickets/mo — €60k+ ACV	\$120/mo	\$1,440/yr

Infrastructure Cost (50 customers)	
App hosting (AWS/GCP): €300–600/mo · Vector DB (Pinecone): €150–300/mo · Monitoring: €200/mo Total: ~€800–€1,200/month (~€12k/year)	

AI compute cost < 2.5% of revenue at any customer tier — structurally healthy unit economics

Cost Structure & Operating Model

COGS		OPEX	
AI Inference ~2% of revenue	Sub-linear — Haiku/Sonnet blending at scale	R&D / Engineering 35–45% Y1 → 25%	2 engineers Y1; 5–6 by Y3
Infrastructure ~3–5% of revenue	Largely fixed; improves per-customer with growth	Sales & Marketing 20–30% of revenue	Founder-led Y1; 2 AEs + marketer Y2
Onboarding ~5% Y1 → <2%	Reduces as integrations are standardized	G&A / Compliance 10–15% of revenue	GDPR legal + SOC2 audit (~€20k one-time)

HEADCOUNT PLAN				
Role	Year 1	Year 2	Year 3	Year 4
Engineering / ML	2	3	5	7
Sales / BDR	1 (founder)	3	5	8
Customer Success	—	1	2	4
G&A / Ops	1	2	3	4
TOTAL	4	9	15	23

Financial Projections & Path to Profitability

Metric	Y1	Y2	Y3	Y4
Revenue	€175K	€1.1M	€2.8M	€5.5M
Gross Profit	€140K (80%)	€935K (85%)	€2.46M (88%)	€4.95M (90%)
Total OpEx	€280K	€800K	€1.48M	€2.37M
EBITDA	-€140K	€135K	€980K	€2.59M
EBITDA Margin	-80%	12%	35%	47%

Break-even at ~21 Growth-tier customers · Month 14-18 · Target: €2M+ ARR before Series A

GenAI Transparency Log

Writing & Documents

- Claude — all business plan sections drafted with AI, human-reviewed and edited
- Claude — prompt engineering design for chatbot and LLM sentiment analysis

Financial Modeling

- Claude — token cost calculations using Anthropic pricing docs (Haiku/Sonnet blending)
- Claude — break-even analysis (fixed cost vs. contribution margin per tier)
- Claude — 4-year P&L model with COGS breakdown and EBITDA margin progression
- Claude + web search — EU BPO market data (McKinsey, Gartner, ICMI, Bain)

Development

- Claude — backend architecture: API pipeline, confidence threshold, escalation logic
- Claude — classification prompt engineering (few-shot + output schema)
- Claude — React dashboard component scaffolding
- Claude — Zendesk/Freshdesk webhook integration guidance

All AI output was reviewed, edited, and validated by the project team. No content used verbatim. All data verified against primary sources.

The Opportunity Is Real.

The Market Gap Is Real.

TICXIS Is Built To Fill It.
