The Problem We Solve

As e-commerce companies grow, customer service costs scale faster than revenue — because most support work is still manual, repetitive, and generates no return beyond the ticket itself.

Two Levels of Pain

Level 1 — Operational Problem

Support teams spend too much time manually reading, categorizing, and routing tickets instead of solving customer problems faster.

"Where is my order?"

"I want a refund"

"My product arrived broken"

"The payment failed"

"I received the wrong item"

Level 2 — Insight Problem

E-commerce businesses fail to use customer service interactions as a source of operational intelligence.

Product Quality

"Arrived broken" complaints → supply chain or packaging issue

Listing Problems

"Not as described" spikes → fix the description before more returns

Return Patterns

High return on one SKU → quality or expectation mismatch

Sentiment Analysis

Negative sentiment rising → early warning before reviews crater

Market Opportunity

A large, growing, underserved market...

...with no dominant EU-native player.

A Large, Growing, Underserved Market

\$23B+

EU Customer Care BPO Market (2023)

→ \$42.6B by 2031

7.6%

EU BPO CAGR

Solid growth baseline

22–26%

AI for CS Growth/yr (EU)

Doubles every 3–4 yrs

~75%

Contact centers not yet using AI

Early-majority phase

Key Market Facts

- Only 25% of contact centers have fully integrated AI
- Global CC outsourcing: \$97B (2024) → \$164B (2030) at 9.8% CAGR
- VoC platform market grew 22% in 2025 alone (Gartner)
- AI-enabled CS delivers 40–50% reduction in service interactions
- No dominant EU-native player in the mid-market sub-segment

Who We Sell To - E-commerce & D2C Brands

PRIMARY ICP — E-Commerce & D2C Brands	Value
Headcount	100–800 employees
Annual Revenue	€15M–€200M
Support Team	15–80 agents
Monthly Contacts	10,000–150,000
Economic Buyer	Head of CX / VP Customer Care
Champion	CX Ops Manager / Customer Insights Lead
Target ACV	€20,000–€60,000 / year
Sales Cycle	6–10 weeks

QUALIFICATION CRITERIA

5,000+ contacts/month

Below this, a spreadsheet analyst still wins

Customer Experience tied to revenue

Churn-sensitive, reputation-sensitive or operationally complex

Stack maturity

Relevant Software already deployed on (Zendesk, Gorgias, Freshdesk, or Intercom)

Geography (v1)

PT · ES · UK

✓ One champion who can sign ✓ No enterprise InfoSec gauntlet ✓ Immediate ROI story ✓ SaaS-native buyers

What VOXLY Delivers

MODULE 1 — Customer Service Automation

- 1

Centralized intake
One chatbot receives all requests regardless of channel
- 2

Structured ticket creation
Extracts category, product, urgency, and required action automatically
- 3

AI classification
Damaged product · refund · delay · return · wrong item · payment issue
- 4

Confidence threshold $\geq 85\%$
Auto-handled · below 85% → routed to human agent for review

MODULE 2 — Operational Intelligence

- Product complaint Sentiment Analysis**
Which SKUs generate the most tickets and for what reason
- Trend detection**
Contact spike correlation with product releases and logistics events
- Recurring issue alerts**
Auto-flag when a product exceeds a complaint threshold in a time window
- Cross-team intelligence**
Push insights to Product, Operations, and C-suite, not just CS team

Competitive Landscape

Company	EU Native	Mid-Market	GDPR	Ticket Intel	Multi-lingual	Price Range
VOXLY ★	✓	✓	✓	✓	✓ PT/ES/IT/DE	€20k–€60k ACV
SentiSum	✗	✓	✗	Partial	Partial	\$36k+/yr
Chattermill	✗	✗	✗	✓	✓ (100+)	€80k+ ACV
Qualtrics	Partial	✗	Partial	Partial	✓	€100k+ ACV
Medallia	Partial	✗	Partial	Partial	✓	€150k+ ACV

No competitor combines EU-native GDPR architecture + mid-market pricing + ticket intelligence + multilingual European language support.

Why Can't OpenAI Just Build This?

Regulatory Architecture

OpenAI, Anthropic, and Google cannot guarantee EU data residency, GDPR-native compliance, or PII redaction by default. Retrofitting this onto a US-first product requires major legal and architectural restructuring. VOXLY is built for Europe from day one.

Vertical Domain

A general-purpose AI has no e-commerce ticket taxonomy, no classification schema, no escalation logic. You would have to build all of that yourself — at which point you have built VOXLY. We ship it pre-built and validated

Full Stack vs Raw API

A general-purpose AI gives you a model. VOXLY gives you the full product — pre-built integrations with existing helpdesk software, an 85% confidence threshold, human-in-the-loop routing, and operational dashboards. Assembling all of that from a raw API would take months and a dedicated engineering team.

Reliability by Design

General AI models hallucinate. VOXLY addresses this structurally — tickets below 85% confidence are never auto-handled, they go to a human agent. That is not a feature you configure in ChatGPT. It is the core of how VOXLY works.

Go-to-Market Strategy

Phase 1 · Months 1–6	Phase 2 · Months 6–18	Phase 3 · Months 18–36
Proof of Concept ■ 5 early customers in Iberian e-commerce ■ Direct outreach by founders ■ Design-partner pricing (50–60% off) for case study rights ■ Targets: users of helpdesk tools, 20k+ tickets a month	Market Expansion ■ Expand to Spain, UK ■ Small sales team + content marketing ■ Integrations with major helpdesk tools ■ Partnership with e-commerce companies	Scaling ■ Partner channel via Customer Experience consulting firms ■ Industry-specific approach for fashion, electronics, home goods ■ Expand to SaaS and B2B companies ■ Reach profitability and position for growth
5 customers · 40%+ ticket deflection	15–18 customers · €490K ARR	35–45 customers · €1.4M ARR

AI Unit Economics - The Silicon Cost

INFERENCE COST PER TICKET		
Input tokens/ticket	~400 tokens	\$0.14 / 1M
Output tokens/ticket	~50 tokens	\$0.28 / 1M
Total Cost per Ticket	450 toke s	~\$0.00007

\$0.07 per 1,000 tickets classified
(DeepSeek V4 Flash)

MONTHLY COST BY CUSTOMER TIER			
Tier	Volume & Contract	Cost/Mo	Cost/Yr
Starter	20,000 tickets/mo — €20–30k ACV	\$1.40/mo	\$16.80/yr
Growth	60,000 tickets/mo — €35–60k ACV	\$4.20/mo	\$50.40/yr
Scale	120,000 tickets/mo — €60k+ ACV	\$8.40/mo	\$100.80 /yr

Infrastructure Cost (50 customers)

- App hosting : €300–600/mo
- Monitoring: €200/mo
- Total: ~€550-€900/month (~€8k/year)

AI compute cost < 0.1% of revenue at any customer tier — one of the lowest in the market

Cost Structure & Operating Model

COGS		OPEX	
AI Inference	DeepSeek V4 Flash - lowest cost in the market	R&D / Engineering	Founding team in Y1, grows with revenue
\$0.00007 / ticket		Core Investment	
Hosting + Monitoring	Application servers - scaltes with customer count	Sales & Marketing	Direct outreach + content for CX managers
€300-600/mo		Founder-led in Y1	
		G&A / Compliance	Legal compliance from day one
		GDPR + SOC2 Roadmap	

HEADCOUNT PLAN				
Role	Year 1	Year 2	Year 3	Year 4
Engineering / ML	1	2	4	6
